

## First Flush Delta Manifold Installation Options

Large diversion volume requirements are easily solved with the First Flush Delta range. Each chamber can hold 115 litres within a 2m diversion chamber and by installing multiple Deltas in a series your first flush volume quickly adds up!

### First Flush Delta Manifold Installation with single flush point

Installing multiple First Flush Deltas in a series makes it easy for you to divert and manage large volume first flush diversion. Connecting the First Flush Delta's outlets together allows you to use a single flush point and makes draining the first flush chamber simple. The single flush point can be easily directed or connected to one location for draining the first flush.

### First Flush Delta Manifold Installation with multiple flush points

Another installation option to connect multiple First Flush Deltas in a series incorporates multiple flush points. This is ideal for situations where the First Flush Deltas cannot be positioned closely next to each other and connecting the outlets is impractical. It also allows for faster first flush draining and for the first flush to be drained to multiple locations.
